

```

        z2=u;
        q= new int *[ z1] ;           //Here   the
an array pointer is created
        for (a = 0;a<z1;a++)
            q[ a] = new int[ z2] ; //Here space
for each row is created
    }

    int main()
    {
        int l, p;

        cout<<"Here you can insert the size of
matrix: ";
        cin>>l>>p;
        matrix A(l,p);                // m a t r i x
object A constructed

        cout<<"Here you can enter the matrix ele-
ments row by row  \n";
        int a,b,cost;

        for(a=0;a<l;a++)
        {
            for(b=0;b<p;b++)
            {
                cin>>cost;
                A.getting_element(a,b,cost);
            }
        }
        cout<<"\n";
        cout<<A.insert_element(2,3);
        return 0;
    }

```
