```

Archive management

To uncompress a downloaded file with the tar.gz extension, type

```
$tar -zxvf file.tar.gz
```

for example

```
$tar -zxvf LiVES-0.9.9.5.tar.gz
```

the terminal will print a long list of directory structures and filenames, where the uncompressed files have been stored.

If you encounter an uncompressed tarball, that you want to unpack, type

```
$tar -xvf file.tar
```

To uncompress a tar.gz file to a tarball, or to uncompress a .gz file, type

```
$gunzip file.gz
```

or

```
$gunzip file.tar.gz
```

For example,

```
$gunzip LiVES-0.9.9.5.tar.gz
```
