

F-Spot can also let you analyse the metadata for individual photos. This is not restricted to just the EXIF data stored with the image, but the directory structure and the extended EXIF information as well. To access the metadata viewer, click on the tags menu and select metadata.

Click on the slideshow option to display a slideshow of all the photos in the current search. To search photos by different parameters, go to the find menu. There are options to search by date, rating and tags. Unfortunately, there is no way to search by metadata, which would have been a really useful feature in a program like this. The export feature is powerful, and can upload selected photos to a number of web services like Picasa, Flickr and Smugmug. It can also burn a CD full of the
