

Load a track by going to **File > Open** and selecting a file. To trim a track, select the portion of it that you want to remove, and hit delete. To reduce noise, select the entire track, go to **Effect > Noise removal**. Tweak the settings and click on OK. This step will take some time, and you will have to make two or three passes to reduce the noise properly.

To record audio, press the round circular red button. You will get a number of options to save the file as. To transcode, go to **File > Export > Advanced Options**, and select a suit-
