

**DPI:** Dots-per-inch, a measure of the resolution of a printer using the density of the ink used.

**Demosaicing:** The process of extracting an image from the raw data in the sensor for further processing.

**Depth of field:** The distance between the nearest and farthest points in focus.

**Diameter of Aperture:** The degree to which the diaphragm in a shutter opens, allowing light to enter the camera.

**Digital Zoom:** Artificial zoom in a camera, analogous to cropping.

**dSLR:** A digital SLR camera. Uses a digital image sensor instead of a negative film.

**Docking Station:** A unit for connecting the camera to a system and charging it at the same time. Serves as a stand for converting the camera into a webcam in some models.

**Drivers:** Software that allows the computer to interface with the hardware.

**Durability:** The resistance to damage from environmental factors and physical strain during use.

**EXIF:** The information about the photo stored within an image file. EXIF data includes camera model, exposure, aperture, etc.

**Edges:** The region of distinction between objects and elements within a photo.

**Embed:** To insert an object in an application without making any changes to the application. Changes made to the application do not affect the object.

**Exposure:** The action of exposing the film or sensor to light.
