

image is an HDR image made from multiple exposures, then tone-mapped.

An HDR Photo composited using different exposure brackets and tone mapping

8.2 Panoramas

As far as experimenting with photos goes, dabbling in panoramas can be a very rewarding experience. A normal panorama is a 360-degree view from any location. Digital panoramas can turn out to be very large in file size even with low resolution photos. There are many kinds of panoramas — there are sphere panoramas that cover 360 degrees in all directions, extremely high definition panoramas that are made by using a heavy zoom and over a thousand photos, vertical panoramas, and more exotic projections like the cube panorama or the planet panorama.
