

the device or on the packaging or documentation. As more and more manufacturers are implementing the standard in their devices, printing directly from cameras and other devices is going to be quite common. It might even translate into printer manufacturers entirely doing away with memory card reader slots on printers. Overall, PictBridge seems to be a viable transfer and printing option with little or no drawbacks. If made to jot down some, then it'll have to be that while the printer is connected to the camera, it uses up battery. Also a few connectivity errors are known to crop up now and then.
