2.3 The XML syntax

If you decide to include a new feature in an app, say for example, enabling your contacts to now store their images. All you would need to do is add a tag for it and you're done! This new contact data file will continue to work with the older app as the older version will just ignore the tag for the contact image. Or if you decide that your to-do app should now have sub-tasks, you could have a to-do tag inside another to-do tag, and depending on how your previous application is designed, it would either ignore the sub-tasks or show all of
