

```

-->
</script>
</head>
<body onload="loadData()">
  <table width="500" border="1"
id="movies">
    <tr>
      <th scope="col">Rank</th>

      <th scope="col">Name</th>

      <th scope="col">Earning</th>
    </tr>
  </table>
  <table id="navMenu" border="1">
    <tr>
      <td>
      </td>
    </tr>
  </table>
</body>
</html>

```

To make it easier to further work on this, you can consider separating the JavaScript code and placing it in separate 'script.js' file, which can then be included in the HTML file using a script tag as follows:

```

<script type="text/javascript" src="script.
js" />

```

You may have noticed the absence of 'Next' and 'Previous' page buttons, or of 'First' and 'Last' page buttons. So let's go ahead and add those. First, let's deal with the JavaScript part of this problem. We need to be able to do four things:

- Go to the first page: this is simple, all you need to do is call

Rank	Name	Earning
1	Titanic	600733155
2	STAR WARS (1977)	460940007
3	Star Wars Episode I: The Phantom Menace	431085295
4	E.T. THE EXTRA-TERRESTRIAL (1982)	398004139
5	Jurassic Park	357067947
6	FORREST GUMP (1994)	328694490
7	Lion King, The	312855561
8	Return of the Jedi	305153945
9	Independence Day	304689255
10	Splash Screen, The	293500675
