

Options. Enable Show hidden files and folders under Hidden Files and Folder.

Use Opera, Firefox or Google Chrome to access the URL. Open the URL – http://MACHINE_NAME_OR_IP:PORT/gui. For example, <http://192.168.1.2:5555/gui>. Remember, you need to use the same port as the chosen for uTorrent.

Scheduling downloads and speed limits

uTorrent has a scheduler which allows you to turn or and off downloads and limit speeds during specified time periods. Click on Options > Preferences > Scheduler. Click on Enable Scheduler. First, enter the the upload and download speeds you want for the schedule you are about to set. The blocks in the window are hours of the week. Click on a block once till it goes light green to enable the speed limits for that hour. Click again till the block becomes white to turn downloads off. Clicking a block again so it becomes dark green sets uncapped speeds on.

Setting the uTorrent scheduler to limit speeds during specific hours of the day
