

in Notepad. To load settings, click on Load Settings and use Explorer to point the program to the INI file on the computer.

Choose a suitable output directory. Using the same directory as the input will overwrite the existing files. Now click on Start batch, and wait while the batch encoding occurs. The conversion will now take place, and a log of the conversion (with errors, if any) will be shown on screen. This log can be saved as a text file for future reference.

You can view log files and save it for later

2.4 Adding a Watermark to Images

If you are concerned about other people passing off your work as theirs, or if you want to identify your images, you can add a watermark on the images. Watermarks are text or image tags overlaid on the images, that cannot be eas-

You can protect your images with a watermark

ily removed on image editing programs. Watermarks are either located at the corners of the image, in the centre or over an important area of the image. IrfanView can be used to add a simple text watermark over a number of images at one go.
