

Creating the ball

some of the techniques in Bryce using basic objects that can be applied to models.

Along the bottom of the scene screen, there is a time slider. Dragging the time slider, which is known as “scrubbing” creates the fourth dimension in the 3D scene. Create a sphere for the ball. Make it smaller, so that you have plenty of room to manipulate within the scene.

Now, scrub the time slider, and select and move the ball. A blue line representing the path of the ball should appear, which is known as a “path”. This is a visual representation of the path of the ball. on the bottom right of the screen, the
