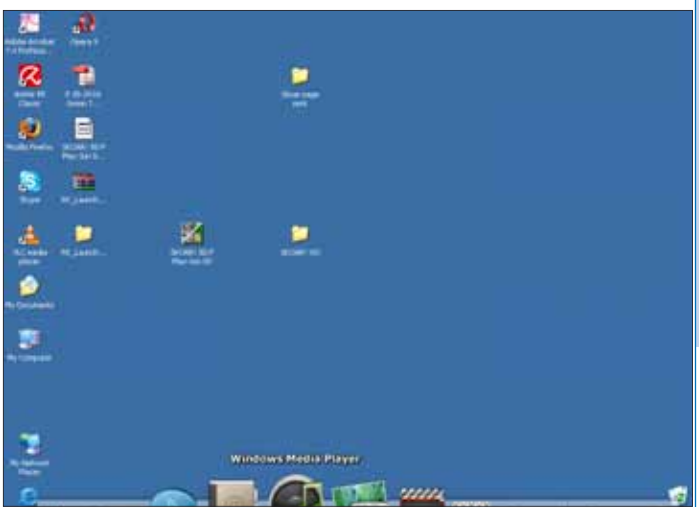
5.4 Adding a Dock to the Desktop

One of the most noticeable differences between a Mac OS dekstop and a Windows desktop is Dock bar which is present in Mac OS. Now with RKLauncher you can have your own dock bar on your windows OS, for both Windows XP as well as Vista.



A dock very similar to the one you find in a Mac

First head on over to **http://home.cogeco.ca/~rklauncher/** and download RKLauncher. The download will be in a ZIP format, next you need to extract these files into a folder. After you have done that, just run `RKLauncher.exe` and you will see the dock bar present on your screen.

You will also notice that the buttons are very similar to the Mac OS buttons. Initially, it will look ugly with just the dock bar overlapping your taskbar. So now let's get rid of your task bar. Right-click on the taskbar and go to Properties. Put a check next to Auto-Hide the Taskbar. Once you have done this, your dock will fit nicely into your dekstop.

You can also customise the contents of the dockbar. If you don't want a particular software, all you have to
