

You can download DExposE2 from <http://devrexster.googlepages.com/dexpose2>. There is no installation process involved. Just extract the RAR file to a folder. Once extracted, open the folder and double-click the DExposE2 icon. This launches

The icon to show that DExposE2 has started

a small icon on the system tray that indicates the program is running.

To use DExposE2, just hit the [F9] key and see how the windows get adjusted. Hit [F9] to return to the window you were working on. You can also select another window once you have hit [F9].

Another similar feature with this is when you hit [F10]. The first screen of DExposE2 remains the same, where you have multiple windows displayed in front of you. But when you use [F10] again, only two windows are displayed.

The arrangements of windows when you press the F9 key

Mac OS also allows you to scroll through the different windows open. Not to worry as that feature is also present in DExposE2. First hit [F9], next use the Page Up and Page Down buttons to scroll through the open windows. This gives more of a magnified view of the open windows.
