

Preferences. Just put a check on Autostart at booting.

Another very interesting feature present with this application is that it allows you to use the memory of your graphics card instead of your RAM for performing its tasks. For this, you will have to open up the preferences window again by right-clicking the DEXposE2 icon on the system tray and selecting Preferences. Then open the previews quality option. If you have a good graphics card we suggest you put a check on Use video memory rather than the RAM option. If you have integrated Intel graphics this wouldn't really make much of a difference.

You can also change the method the windows are exposed. You can switch between Slide, Fade and No animation. You can also adjust the slide speed and the way the windows fade. To do this go

Suspend and Refresh buttons to help your needs

Global Settings for DEXpose2

Adjust the quality of DEXpose2
