

replace an 'i' with a 'l' or an 'a' with '@' as in "M1cr0\$0ft" or "P@ssw0rd". But these substitutions can be effective when combined with other measures, such as length, misspellings, or variations in case, to improve the strength of your password.

- Avoid your login name. Any part of your name, birthday, social security number, or similar information for your loved ones constitutes a bad password choice. This is one of the first things criminals will try.

- Avoid dictionary words in any language. Criminals use sophisticated tools that can rapidly guess passwords that are based on words in multiple dictionaries, including words spelled backwards, common misspellings, and substitutions. This includes all sorts of profanity and any word you would not say in front of your children.

- Use more than one password everywhere. If any one of the computers or online systems using this password is compromised, all of your other information protected by that password should be considered compromised as well. It is critical to use different passwords for different systems.

- Avoid using online storage. If malicious users find these passwords stored online or on a networked computer, they have access to all your information.

Set up how Mike will use the computer

Parental Controls:

- ☒ On, enforce current settings
☐ Off

Activity Reporting:

- ☒ On, collect information about computer usage
☐ Off

Windows Settings:

- Windows Vista Web Filter**
Control allowed websites, downloads, and other use
- Time limits**
Control when Mike uses the computer
- Games**
Control games by rating, content, or title
- Allow and block specific programs**
Allow and block any programs on your computer
