

This also has a downside to it. Hence, we should be cautious and it is wise to enter your password each time you browse.

6.7 Encrypt messages

Blender xxTea edition

You can use for encrypting your messages and any other information is Blender. You can download Blender at <http://handheld.softpedia.com/progDownload/Blender-XXTea-Edition-Download-70031.html>. With Blender, all you need to do is store your messages like you normally do.

All you need to do is store your data normally in the places you do. So be it your messages, Notes, tasks or Contacts, you can encrypt them using Blender. Send this encrypted data over email or send it as a file or your recipient as a message who can decrypt it using Blender so that only the two of you can understand the message. Since Blender can be used even on a web page, you do not need your mobile phone to decode or read the messages. All that is needed is the same cipher.

However, with Blender you cannot encrypt short messages such as short PIN numbers because Blender does not encrypt messages with a character length of 4 characters or less.

6.8 Filter spam messages

As if spam in our emails were not enough, that we needed spam on our mobiles too! But then, it's all about business and everyone out there wants to earn a quick buck. The result – we, the victims of spam. It's high time we took control of the situation. We could also help our friends and family out of the menace.

One application that is effective in arresting SMS spam is SMS Spam Manager. You can access this application at <http://www.webgate.bg/products/ssm/>. Once you download SMS Spam Manager, you need to configure it by setting the filters for blocking spam. There are six rules for this. This way you are able to filter all your incoming text messages. The first three rules are general – Accept all, block all, and Accept phonebook only.

Accordingly, all messages are allowed when you select Accept all. In this case, the filters are inactive and they do not monitor the messages you receive. In case of Block all, again it is similar. Spam Manager will not monitor the messages in any way, but rather block all messages. The safest filter, however is the third case where
