

only messages from contacts in your Phonebook are allowed to pass through. This way you are assured that you receive messages only from known people.

The remaining three filters in SMS Spam Manager are worth noting, because these are what effectively fight the spam menace. You can block messages on the basis of telephone number, prefix number or text match. This is really effective. No longer would those messages from those short code special numbers go undetected. All we used to see was some number as 45678 and there was nothing we could do. With Spam Manager, this number is detected and automatically blocked.

However, there is a catch to it. For example, your cellular operator keeps sending you offers for services in astrology and also those love and beauty tips. You're probably disgusted with them, but you don't want to miss out on your bill status. All these messages probably originate at the same number. Therefore, blocking out that number wouldn't be a wise decision after all. All you need to do is type in the phrase that typically appears in the spam messages. So, "know what your stars say" or "Special love tips" or "lose 5 kgs in a week" could reduce your agony drastically, if not put an end to it!

Finally, nothing is lost. Similar to a spam folder in your mailbox where you can occasionally go and check if you have lost any mail, you can check to see if any message has been wrongly filtered out as spam and restore them to your inbox.

6.9 Theft protection

Phone theft is rising by the day. We have heard of all kinds of technologies being implemented by cellular manufacturers these days to ensure that you would be able to recover your handset in the event of theft. But what if your handset is not equipped with such technology? You should not be left behind. Phone Guardian was aimed at such users. You can download Phone Guardian v3.0 at <http://www.filecluster.com/downloads/Phone-Guardian.html>. This application works by auto locking your phone in case it is stolen. To do this, you need to send a lock SMS.

Phone Guardian decodes the message and understands that your phone is not in your possession any more and automatically locks your phone. This prevents abuse of your personal information. Whoever recovers the phone will only be able to use
