choose Fresh Install. We'll use the desktop edition and choose to install from CD/DVD/USB. Click Next.

The next step is entering the login information for the account. Enter a password for the administrator account (root). Then, enter the user account name and password. Click Add to finalise it. If you have many other users using the computer, you

Selecting hard drive on which PCBSD is to be installed

can create more Ids similarly. If you want the system to boot up into your account, check the Auto-login user option.

The step after that is the partitioning bit. Here, you can choose if you want the entire hard drive to be used. This is recommended if you have an empty drive have no plans of using any other operating system on your PC. It's also recommended if you have two hard drives and one of them is to be dedicated for PC-BSD. You can customize the partition by clicking the Customize the partition layout checkbox. Create a base partition with mount point / which will hold all of your data. The swap partition can be small between 500 MB to 2000 MB in size.

Now, choose the applications you want present in your installation. To do this, select the applications you want from the top list and click the down arrow icon to add them. Click Next to proceed. Unlike other distributions where there
