

Start by selecting a language for the Ubuntu installation and click on Forward. The next step is to setup your timezone and region. Click on your location on the map. For India, the city to select is Kolkata. The keyboard layout is next. Leave it as the default layout.

The next step is to partition the drive and is usually where people usually get confused. If you have an empty drive and want to dedicate it to the distribution, click on the drive and choose the Use the entire disk option. The installer will automatically partition the drive for you and begin the installation. If you have another operating system coexisting on the same drive, choose the Specify partitions manually (advanced) option and proceed.

There are two partitions to be created for a distribution to work. The primary partition with all the information on it is a ext3 partition and the second is a swap partition which is somewhat similar to a paging file on Windows. Click on the **New Partition** and create an ext3 partition, enter a size for this partition, and set the mount point as /. Follow the same steps to create a swap partition except here, set the Use as option to swap area. If you don't have sufficient space, you'll use a partition manager to make space on the drive not a partition.

The next step involves entering information on your user. Enter your name, a user name for the account and the password for it. Finally, give a name for your PC which will be used to

Who are you?

What is your name?

What name do you want to use to log in?

If more than one person will use this computer, you can set up multiple accounts after installation.

Choose a password to keep your account safe.

Enter the same password twice, so that it can be checked for typing errors. A good password will contain a mixture of letters, numbers and punctuation, should be at least eight characters long, and should be changed at regular intervals.

What is the name of this computer?

This name will be used if you make the computer visible to others on a network.
