

Mode” screen will show up. This is still the “System Analysis” step of the installation. There will be three choices given to you, “New Installation”, “Update” and “Repair installed system.” If you have been using a previous version of OpenSUSE, such as 10.0, and are using the 11.1 installation now, update is the option. Otherwise, go for “New Installation”. The “Use Automatic Configuration” checkbox is selected by default, if it is not, make sure that it is checked. For an advanced mode of installation, uncheck this box.

Next, you will be prompted to select the timezone. For Indian users, this is Kolkata. Howering over India is sufficient to select this option. Check the box that says “Hardware Clock is set to UTC” and click on “Next”.

The installation goes in the “Desktop Selection” step now, which gives you a wide selection of Desktop Environments and Windows Managers to choose from. GNOME is available, as well as two versions of KDE. Gnome works marginally faster than the latest version of KDE, and is known to crash less, but KDE is more eyecandy. Right now, you will face a dilemma that many Linux users have been facing throughout Linux history,

Choose a desktop environment
