

options such as Sleep Mode, etc. We recommend you try these options out yourself depending on your Bluetooth device.

5.4 The future of Bluetooth

So how can you use Bluetooth? Bluetooth can be used in the following ways.

- All computer peripherals are wireless – wireless mouse, joystick, keyboard, modem.
- Your digital camera is synced wirelessly with the computer.
- The mobile phone is Bluetooth enabled allowing you to access your computer for information, sync with the digital camera for transferring pictures. Access your phone book via Bluetooth.
- Access the internet wirelessly by syncing your laptop to your modem in another room.
- The lights in your room, your TV, your a/c – can all be synced together, with one remote allowing you control of your household environment.
- Imagine an "intelligent house" with everything in your control at the touch of one remote control – enabled with Bluetooth. That is the future.
- Cars are also becoming increasingly reliant on Bluetooth technology.
- The future of Bluetooth may include heavy reliance on Bluetooth technology for mobile commerce as well. Paying at a ticket counter, the line at your store, a pay-and-park? All are possible using Bluetooth.
- A few more initiatives are being undertaken to transfer power wirelessly – something many people believed was impossible. Once that is accomplished, you be able to charge your mobile phone wirelessly!
- Today, Bluetooth has been able to combine with Wi-Fi technology as part of the Bluetooth 3.0 specification. It can access 3G and WiMax networks. The short range of <10 metres is also increasing. Better telephony, better connectivity, better communication.
- Bluetooth allows new age technology to sync. Recent news reports show how the Apple iPhone and the Nintendo Wii can now be linked together using Bluetooth. So talk, game, communicate, share pictures and connect to the internet. All
