

Portable Multimedia Players

Last month, I gave away my third generation iPod Nano, to a very good friend and now commutes to work, thus, the hunt for a replacement PMP was on. The Nano is compact, but has a small screen for video. Some people want a video-PMP, but they aren't willing to shell out for a larger display. I feel that for videos, the screen size should be at least three inches.

If you want a PMP strictly for music, something compact with not-too-large a screen will suffice. However, there are exceptions and no two peoples tastes are alike. Someone who wants only music may want the luxury of a large screen or a touch-based device. Another important consideration is the storage space and medium. The traditional HDD storage has given way to flash and while two and four GB flash-based PMPs are as common as
