

If you need to replicate, why rework? Use scripting

Outliner

The Outliner is a window where all the objects and attributes in your scene are compiled. You can hide objects by selecting them and pressing

[Ctrl] + [H] Hide/Unhide is as simple as [Ctrl] + [H] and [Shift] + [H]

and unhide

them by going to **Windows > Outliner**, selecting the object and pressing [Shift] + [H].
