

Select the container, and under the `fluidShape1` attributes, change the following options under **Contents Details**:

Fuel: Fuel Scale = `1.960`; Reaction Speed = `0.970`

Scroll down to the "Shading" section and change the following options:

Shading: Transparency = `White Grey`; Dropoff Shape = `Sphere`; Edge Dropoff = `0.440`

Color: Selected color = `Black`

Scroll down to the "Incandescence" section, and change the graph as shown on the image. Play the animation and stop it in a place where you think it is suitable to render. Render one single frame and you'll see the Fire that you have created from scratch. For more, watch the video titled `Dynamics_Fire` in this month's DVD.
