

by the constant `FACEBOOK_API_VALIDATION_ERROR`), `errorTitle`, and `errorMessage`. The values for `errorTitle` and `errorMessage` are used to populate the error dialog's title and body content, respectively. Add the following code block to the end of `publisher_callback.php` to achieve that:

```
function getPublisherError($msg) {
    return array( 'errorCode' => FACEBOOK_API_VALIDATION_
ERROR,
    'errorTitle' => 'Facebook Publisher Error',
    'errorMessage'=> $msg );
}
```

You are using the `getPublisherUI()` function to provide the markup for the Publisher's user interface, which Facebook requests after sending the `publisher_getInterface` POST variable. `getPublisherUI()` uses the `getCSS()` function to provide the styles for the Publisher. Add the following code block to the end of `publisher_callback.php`.

```
function getCSS() {
    $css = "
    <style>
    h1 { font-size: 14px; font-weight:bold; text-align:center;
margin-top:6px;
    margin-bottom:6px; }
    .panel { text-align:center; background-color:#F7F7F7;
padding:10px 0;}
    #complimentTable { margin: 5px auto; }
    #complimentTable .textInput { width: 85%; }
    #complimentTable td { text-align:center; }
    .category { float:left; height:75px; text-align:center;
margin:8px; }
    .category img { width:48px; height:48px; }
    .category .categoryTitle { height:20px; font-weight:bold;
}
    </style>";
    return $css;
}
function getPublisherUI( $uid ) {
    global $_categories;
    $out = getCSS();
    $out .= "
```
