

by double-clicking on it.

Drag and drop the following views in the View window:

- Labels (The to:, Subject: and main text: labels)
- Text Fields (to enter the email address, subject and the actual email body)
- Button (Label it SendEmail)

Now open the EmailViewController.h file and enter the following source code in it:

```
#import <UIKit/UIKit.h>
@interface EmailViewController : UIViewController {
    IBOutlet UITextField *to;
    IBOutlet UITextField *subject;
    IBOutlet UITextField *body;
}
@property (nonatomic, retain) UITextField *to;
@property (nonatomic, retain) UITextField *subject;
@property (nonatomic, retain) UITextField *body;
-(IBAction) btnSend: (id) sender;
@end
```

Now, go back to the Interface builder and do the following: Control-click and drag the File Owner's item to all the TextFiled views and then select the to, subject and email body labels. Control-click and drag the Button view on to the File Owner's item and select btnSendEmail.

You need to open the EmailViewController.m file after this and insert the following source code:

```
#import "EmailViewController.h"
@implementation EmailViewController
@synthesize to, subject, body;
- (void) sendEmailTo:(NSString *) toStr withSubject:
(NSString *) subjectStr withBody: (NSString *) bodyStr {
    NSString *emailString = [[NSString alloc] initWithForma
t:@"mailto:?to=%@&subject=%@&body=%@",
    [toStr stringByAddingPercentEscapesUsingEncoding:NSUTF8
StringEncoding],
    [subjectStr stringByAddingPercentEscapesUsingEncoding:N
SASCIStringEncoding],
    [bodyStr stringByAddingPercentEscapesUsingEncoding:NSAS
CIStringEncoding]];
    [[UIApplication sharedApplication] openURL:[NSURL
```
