

property to Digit.jpeg. Open the TouchDetectionViewController.h file and add the following code:

```
#import <UIKit/UIKit.h>

@interface TouchDetectionViewController :
UIViewController {
    IBOutlet UIImageView *imageView;
}

@property (nonatomic, retain) UIImageView *imageView;
@end
```

Now, go back to the Interface builder, [command] + click and drag the File's Owner item to the ImageView view and select it. Then open the TouchDetectionViewController.m file and add the following code to it:

```
#import "TouchDetectionViewController.h"
@implementation TouchDetectionViewController
@synthesize imageView;
//fired when the user's finger(s) touches the screen
-(void) touchesBegan: (NSSet *) touches withEvent:
(UIEvent *) event {
    //get all touches on the screen
    NSSet *allTouches = [event allTouches];
    //compare the number of touches on the screen
    switch ([allTouches count])
    {
        //single touch
        case 1: {
            //The UITouch object contains the tapcount property
            which tells the //application whether the user has single
            tapped or tapped more than once //on the screen
            UITouch*touch=[[allTouchesallObjects] objectAtIndex:0];
            //compare the touches
            switch ([touch tapCount])
            {
                //single tap
                case 1: {
                    imageView.contentMode = UIViewContentModeScaleAspectFit;
                } break;
                //double tap
                case 2: {
```
