

```

CGPoint touch1PT = [touch1 locationInView:[self view]];
CGPoint touch2PT = [touch2 locationInView:[self view]];
NSLog(@"Touch1: %.0f, %.0f", touch1PT.x, touch1PT.y);
NSLog(@"Touch2: %.0f, %.0f", touch2PT.x, touch2PT.y);
CGFloat currentDistance = [self distanceBetweenTwoPoints:
touch1PT
  toPoint: touch2PT];
//zoom in
if (currentDistance > originalDistance)
{
  imageView.frame = CGRectMake(imageView.frame.origin.x
- 2,
  imageView.frame.origin.y - 2,
  imageView.frame.size.width + 4,
  imageView.frame.size.height + 4);
}
else {
  //zoom out
  imageView.frame = CGRectMake(imageView.frame.origin.x
+ 2,
  imageView.frame.origin.y + 2,
  imageView.frame.size.width - 4,
  imageView.frame.size.height - 4);
}
originalDistance = currentDistance;
} break;
}
}

```

Save the project and press [command] + [R] to start the application on the iPhone Simulator. Now you can tap on the UIImageView and drag it across the screen by simply moving the finger without lifting it off. In these similar ways, you can apply more gestures without any difficulty.
