

Now that we have our rainbow tables, what do we do next? Use them of course!

The following images show how easy it is to do with the graphical RainbowCrack GUI.

First we click on the menu entry File->Add Hash... to get this dialog which lets us add a hash along with a comment to the list of hashed we want to crack.

Next we go to Rainbow Table->Search Rainbow Tables in directory... and select the directory in which we placed the files generated before.
