

added to the `columns.html` file. For this method, it is very important that the sidebar ID appears before the content ID in the markup, to ensure that the top edges of the two columns will line up. This is not entirely semantic in approach, as it is likely that you will want your main content to come first.

```
<body> element of columns.html.  
<div id="masthead">  
...masthead content goes here...  
</div>  
<div id="sidebar">  
...sidebar content goes here...  
</div>  
<div id="content">  
...main content goes here...  
</div>  
<div id="footer">  
...footer content goes here...  
</div>
```

Save the file and load it in the browser. At this stage everything is still totally linear.

The document is divided into four main sections and the browser defaults style the page

Let's apply some basic styles to two of our sections, specifically masthead and footer. All we're going to do here is add identical rules for each,
