

```
/* Heading styles */
h1 {
font-family:Helvetica,Arial,sans-serif;
line-height:140%;
color:#333;
}
h2 {
font-family:Helvetica,Arial,sans-serif;
line-height:140%;
color:#333;
}
h3 {
font-family:Helvetica,Arial,sans-serif;
line-height:140%;
color:#333;
}
```

Note that aside from the selector, every other rule applied to the selectors are exactly the same. A more efficient way of doing the same thing would be to group the three rules to save space and time.

```
/* Heading styles */
h1, h2, h3 {
font-family:Helvetica,Arial,sans-serif;
line-height:140%;
color:#333;
}
```

What if you wanted to apply one or a few extra rules to one of the grouped selectors but everything else is the same. Again the efficient way would be to group them and define the common rules and then defining the selector again and putting in the extra rules

```
/* Heading styles */
h1, h2, h3 {
font-family:Helvetica,Arial,sans-serif;
line-height:140%;
color:#333;
}
/* Additionally, render all h1 headings in italics */
```
