

```
body {  
margin: 10px;  
background-color:#CCC;  
}  
/* Container for all page content */  
#container {  
height:200px;  
border:1px solid #000;  
background-color:#FFF;  
}
```

Save the new style sheet. All the properties used should now be familiar to you. Notice that again the body has a gray background and a 10-pixel margin from the edges of the browser window as with the previous exercise. Again, the container is white, but this time has no padding, and has a set height of 200 pixels so that it doesn't collapse due to being empty.

5.4 Background images

The basic property and declaration is very similar to that of background-color. Load `images.html` in your browser. Quickly get a background image in there. Tile images can be repeated infinitely either horizontally, vertically, or sometimes both directions. First, the tile can be made to appear in the container by adding the background-image property to the container selector.

```
/* Container for all page content */  
#container {  
height:200px;
```

The small image tiles throughout the background
