

```

/* Unordered list for drinks and food lists */
ul {
  list-style:none;
}

li {
  display:inline;
  margin:0 0 0 10px;
  padding:0 0 0 15px;
}

/* Images for drinks list only */
#drinks li {
  background:transparent url(images/drinks.gif) no-repeat
  left top;
}
/* Images for food list only */
#food li {
  background:transparent url(images/food.gif) no-repeat
  left center;
}

```

The food and drink components have separate icons

6.1.6 Grouping Items with Classes

In our two lists, there are clearly other groupings that can be defined. Drinks are grouped into alcohol, mixer, and hot by adding a matching class to each list element. In this example, the approach is used to group the food, using breakfast, dinner, and side classes.

```

<ul id="drinks">
  <li>Drinks Menu</li>
  <li class="alcohol">Beer</li>
  <li class="alcohol">Spirits</li>

```
