

```
ul {  
  list-style-type:none;  
  margin:0;  
  padding:0;  
}  
li {  
  padding:0;  
}
```

This ensures you start with a blank canvas. No default spacing is in play. From this point on, all spacing is on your terms, avoiding the confusion that often comes with navigation list styling.

6.3.2 Turn list elements into buttons

Now some styling can be applied to make the list elements look a little more like buttons. The padding can now be adjusted also to provide enough space around the text.

```
ul {  
  list-style-type:none;  
  margin:0;  
  padding:0;  
}  
li {  
  background: #DDD;  
  margin: 0;  
  padding: 2px 10px;  
  border-left: 1px solid #fff;  
  border-top: 1px solid #fff;  
  border-right: 1px solid #666;  
  border-bottom: 1px solid #aaa;  
}
```

In this example, shades of gray and white borders are used to give the buttons a slightly three-dimensional feel.

6.3.3 Define the width of the buttons

It is necessary to define a set width for the buttons, which can be done with the `ul` selector. Here 160px seems appropriate.
