

```
.six {  
background: transparent url(images/ol6.gif) no-repeat left  
center;  
}
```

So you now have six selectors that correlate with the classes assigned to the ordered list. Mixing all of this together and loading the page in the browser gives the basic customised list.

6.4.4 Dressing up the ordered list

With the custom icons working, you are now free to add further styling to the ordered list. Many of the declarations used to create the vertical navigation list earlier are reused here, specifically the background colours and borders.

Note, however, that the unique classes added to each list item overrule any background-color declaration in the li selector, so background-color needs to be declared for each class. The padding is also adjusted to replicate that in the vertical navigation example, allowing the custom numbers and list item text to be spaced appropriately.

```
ol {  
list-style-type:none;  
margin:5px;  
padding:2px;  
border:1px solid #333;  
width:160px;  
font: bold 12px 'Lucida Grande',Verdana,sans-serif;  
}  
li {  
margin: 0;  
padding: 2px 10px 2px 25px;  
border-left: 1px solid #fff;  
border-top: 1px solid #fff;  
border-right: 1px solid #aaa;  
border-bottom: 1px solid #666  
}  
.one {  
background:#DDDDDD url(images/ol1.gif) no-repeat 3px  
center;  
}
```
