

7 Links

CSS

This example takes the list styling from one of our previous examples and reworks it for a list of links. Create a new template called `linkslst.html`. Again, note that in the examples the following is placed inside the `body` element, and also inside a container `div` as in previous chapters.

```
<ul>
<li><a href="#">Beer</a></li>
<li><a href="#">Spirits</a></li>
<li><a href="#">Cola</a></li>
<li><a href="#">Lemonade</a></li>
<li><a href="#">Tea</a></li>
<li><a href="#">Coffee</a></li>
</ul>
```

Now create the `linkslst.css` file using the version provided previously. Remove any existing declarations for `<ul>` and `<li>` elements, and ensure the following declarations are added alongside existing declarations for `<body>` and container:

```
ul {
list-style-type:none;
margin:5px;
padding:2px;
border:1px solid #333;
width:160px;
font: bold 12px 'Lucida Grande',Verdana,sans-serif;
}
li {
background: #DDDDDD;
margin: 0;
padding: 2px 10px;
border-left: 1px solid #fff;
border-top: 1px solid #fff;
border-right: 1px solid #aaa;
border-bottom: 1px solid #666
}
```

This will display the unordered list almost exactly as it did in the previous chapter, except that the list items are now links, and as there are no pseudo class declarations in the style sheet, the links display in the default blue and
