

```
/* Define the container for positioning examples */
#container {
width:400px;
height:400px;
margin:10px;
padding:10px;
border:1px solid #000;
background-color: #FFF;
}
```

8.5.6 absolute

The element is placed to the top, right, bottom, left, or combination thereof of the nearest parent element that has been placed out of the document flow.

8.5.7 fixed

The element is placed to the top, right, bottom, and/or left of the browser window.

8.5.8 relative

The element is placed to the top, right, bottom, and/or left of the element's default position.

```
p {
font-size:100%;
line-height:150%;
}
```

Here, the position relates not to any parent element or to the browser window, but specifically to the properties of the element itself. Notice that the gap remains between the heading and the paragraph, where the image would normally sit in its default position. Let's move the image again. Here, the position is first defined as absolute, and then the coordinates are set using top and right.

```
/* Define image position */
img {
position:absolute;
left:400px;
}
```

By declaring left as 400px respectively, and combining this with position:absolute, the image is moved appropriately in relation to the
