

Compare the broadband penetration across the globe in 2005 to the stats we've provided. Source WorldBank, 2007

in India, is that people are now going to be able to do quick searches, to find stuff online. Whether India likes it or not, a lot of small businesses are going to need to get online, and fast, in order to maintain the edge they have over competition.

What this translates to is an increased number of people searching for services, and thus an increased number of businesses looking to be found by all those new searchers. It's the good old supply and demand chain at play here, and since there's an increased demand, there's bound to be a huge increase in supply, and that's where you come in. As a Digit reader, and a geek, you're already ahead of the curve, and can start supplying your services to those who want to play catch up.

1.1.3 Big bucks from small businesses

As budding entrepreneurs, all of you interested in this Fast Track book will be looking forward to making money from web services. However, the biggest mistake most of us make is to spend too much time running after the big bucks. All of us want to start a small business and target corporates, or big name companies that would look good on your client list. Some of us are even lucky to bag those projects, while most of us aren't going to be able to...

Consider the stats from various research firms – they suggest that in Asia, of all the money changing hand for goods and services, anywhere between 90 to 95 per cent of business is done by small- and medium-sized businesses. India doesn't buck that trend, so instead of focusing your energy and attention at corporates, which frankly, are probably already working
