

How better could that get?

When the customer logs on to his web hosting account, the process automatically checks if the CMS to be installed is compatible or not and then it automatically installs it. There is no overhead of searching for the CMS online and waiting for it to download. When an updated version of the CMS is out, the installer updates the version on the same one click. This is an add on feature which might make your web hosting a good choice for most of the customers.

But to do this, you need to choose a CMS for the chosen platform. If you decide to use LAMP as your platform, then you can probably go in for Drupal, WordPress, Joomla, TYPO3, MODx and many more. These are PHP compatible CMSs that are open source which means they are free of
