

Setting permissions

to go in for WordPress only, Drupal and Joomla are not at all easy to learn. There is another CMS called the eZpublish powered by LAMP, also has a complicated framework like Drupal. eZpublish is also open source that is easily available.

If your customer chooses IIS, then dotnetnuke and Kentico CMSs are good. dotnetnuke is free and open source whereas the Kentico CMS is proprietary software and therefore charged. Both are supported by the SQL server. Well, there is difference of opinion in this case. dotnetnuke is free of cost, open source, Kentico isn't. Kentico has poor development environment but has an excellent backend for administration. Even those from the non-technical background can handle dotnetnuke sites, whereas kentico sites require technical knowledge to be handled.

3.2.1 Does your customer need a CMS, or will HTML do?

Content management systems are designed to enable web site owners to
