

Administration menu (drupal.org/project/admin_menu)

Meant for users who are new to Drupal, this module is a must for site builders and administrators. The module provides a theme-independent administration interface i.e. (“navigation”, “back-end”) for Drupal.

Administrate your web site from the same admin page, irrespective of your theme

Date (drupal.org/project/date)

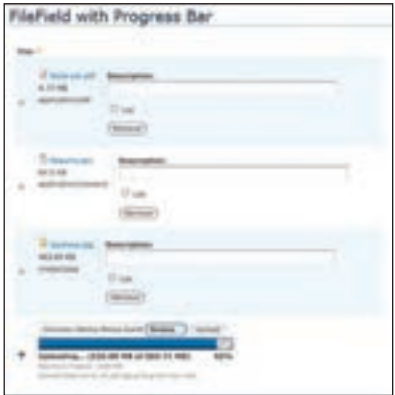

This plugin provides date and time field for the CCK content module, the CCK module and Date API modules are required to use this module.

Image Cache (drupal.org/project/imagecache)

Create presets for image processing. In case the image cache derivative is not present the process goes in the following order first the web server's rewrite rules detect that the image cache is missing it then passes it on to Drupal which in turn gives it to image cache to generate the file.

File Field (drupal.org/project/filefield)

A great tool for developers who manage a number of multimedia files like video, audio and podcasts. The File Field module gives a universal file upload for CCK, an alternative to core's Upload module.

Manage your multimedia content with filefield
