

Image Field (drupal.org/project/imagefield)

A feature rich module for image management it gives the following options- Multiple images per node, Resolution restrictions, Default images, and Extensive views support. Its a CCK based alternative to the legacy image project Image Field, it provides an image upload field for CCK.

Image API (drupal.org/project/imageapi)

Although the Image API module does not provide any new feature to your Drupal site it provides an API other modules can leverage. GD2 and Image Magick support are distributed with Image API.

Install only if other modules you are using requires it, meant to be used in place of the API provided by image.inc

Image (drupal.org/project/image)

Creates thumbnails and additional sizes automatically, this module provides with proper permissions to upload images to Drupal sites.

FCK Editor (drupal.org/project/fckeditor)

A lightweight module, the FCK editor does not require any installation on client computer. FCK editor – a visual HTML editor, sometimes called WYSIWYG editor. As a HTML text editor it brings many useful WYSIWYG editing functions of popular desktop text editors like Word to the web.

Google Analytics (drupal.org/project/google_analytics)

To add the Google web statistics tracking system to your Drupal website

IMCE find it on drupal.org/project/imce

To manage your personal directories use the IMCA module as it provides file and image uploading and is a browser as well. The IMCE has the following features:

- Basic file operations: upload, delete
- Image(jpg, png, gif) operations: resize, create thumbnails, preview
- Support for private file system
- Configurable limits for user roles: file size per upload, directory quota, file extensions, and image dimensions
- Personal or shared folders for users
- Permissions per directory
- FTP-like directory navigation
- File sorting by name, size, dimensions, date
- Tabbed interface for file operations
