

The Add New Page page opens, where you can write a new post to your WordPress blog.

2. Type the title in the Title text box and the page content in the text box.
3. Choose the page template from the Page Template drop-down menu.

The Page Template drop-down menu in the Attributes module by default is shown on the right side of the page. You can reposition the modules on this page.

4. Click the Publish button to save and publish the page to your site.

7.5.2 Creating a template for each Post category

You don't have to limit yourself to creating a static-page template for your site. No, you can completely gorge yourself at the table of WordPress templates and create unique sections for your site.

You can create category templates for all categories in your blog simply by creating template files with filenames that correspond to the category ID numbers and then uploading those templates to your WordPress themes directory.

7.5.3 Pulling in content from a single category

WordPress makes it possible to pull in very specific types of content on your Web site through the `<query_posts>` template tag. If you have a category called WordPress, and you want to display the last three posts from that category on your front page, in your blog sidebar, or somewhere else on your site, you can use this template tag.

The `<query_posts>` template tag has several parameters that let you display different types of content, such as posts in specific categories and content from specific pages/posts or dates in your blog archives.

7.5.4 Customised Navigation bar

Adding too many pages to a WordPress blog that has a navigation bar in the header can really make your WordPress blog a mess. There are options to control what pages are shown in the navigation bar and even a way to add external links.

The Template Tag, `wp_list_pages()`, displays a list of WordPress Pages as links. It is often used to customize the Sidebar or Header. You can simply edit the `header.php` file and exclude any page id you want, you can also include the pages you want. So now the code of the top nav bar will look like this:
