

items to store in Jump-lists”.

- Set it to whatever value you think will be sufficient while not intruding too much on screen real-estate. Experiment to your liking.

4.2.2 Quick Access to Media

Windows Media player, iTunes 9 and Zune Player, all let you quickly access your frequently used media, playlists apart from letting you quickly pause/play, go to next/previous song and rate your music from Jumplists. Its worth checking out. Even Winamp boasts of similar functionality with latest versions.

Quick Access to your Media through Jumplists in Zune

Both of the browsers let you quickly open a private browsing window by giving an option there itself.

4.2.4 Pin Folders and Searches To the Taskbar

This is by far our favorite feature of JumpLists and saves a lot of time by giving instant acces to recently used folders and frequent searches,

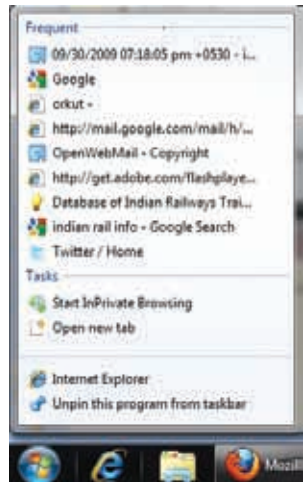

Change the number of items to be displayed in jump lists through this window

4.2.3 Open Private Browsing or Bookmarks Easily

Private browsing has been there in IE and Chrome for quite some time now. But accessing it takes opening the program and going through a couple of steps, navigating to the option and then activating private browsing mode. But with Jumplists, it's just two clicks away from the desktop.

Both of the browsers

Quickly Start InPrivate Browsing through the IE Jumplist
