

Snapping an application to the left

4.6 Other mouse gestures

Windows 7 has not only brought gestures for those who use touchscreen devices, but for mouse users too. So, instead of right-clicking a Taskbar icon to access its jump list, you can press and hold left-click and drag upwards (Outwards from the Start bar) to smoothly call it up. Similarly, clicking and dragging down the address bar in IE opens the browsing history.

4.7 Desktop Gadgets

Windows Sidebar isn't included in this version of Windows. Instead, you can have gadgets anywhere on your desktop in Windows 7 and use the Aero Peek features to temporarily view your desktop gadgets without minimizing or closing the windows you're working with. Gadgets are mini-programs, which offer information at a glance and provide easy access to frequently used tools. For example, you can use gadgets to display your CPU and RAM usage, view a picture slide show, view continuously updated headlines through feeds, or look up contacts. This way, if you want to keep track of what's happening in the news while you work, you don't have to stop what you're doing to switch to a news website. If you see a headline that interests you in the feeds, you can click that headline, and your web browser will open directly to the story.
