

Setting default printers for various networks to automate switching.

default. You can also manually pair printers and networks if you wish to.

- Open Devices and Printers from the Start Menu.
- Left Click on a printer, and then click on Manage default printers on the toolbar at the top.
- Select “Change my default printer when I change networks”.
- In the Select network drop-down list, click on a network.
- In the Select printer list, click on the corresponding default printer.
- Click Add.
- Repeat previous 3 steps as needed. When you're finished, click on OK.

Note

This feature is only available in Professional and Ultimate editions of Windows 7. Also, it only works on laptops and netbooks. But then again, how often do you plan to move your desktop around anyways?

6.6 Internet Explorer 8 Compatibility Mode

If your company's websites is old and hasn't been updated in quite some
