

We will now explain some of the common preprocessor directives used in PIC C programs:

Standard C	#DEFINE ID STRING	#IF expr	#NOLIST
	#ELSE	#IFDEF id	#PRAGMA cmd
	#ENDIF	#INCLUDE "FILENAME"	#UNDEF id
	#ERROR	#LIST	
Function Qualifier	#INLINE	#INT_GLOBAL	#SEPARATE
	#INT_DEFAULT	#INT_xxx	
Pre-Defined Identifier	__DATE__	__LINE__	__PCH__
	__DEVICE__	__PCB__	__TIME__
	__FILE__	__PCM__	__FILENAME__
RTOS	#TASK	#USE RTOS	
Device Specification	#DEVICE CHIP	#ID "filename"	
	#FUSES options	#ID NUMBER	
	#ID CHECKSUM	#SERIALIZE	
Built-in Libraries	#USE DELAY CLOCK	#USE FIXED_IO	#USE RS232
	#USE FAST_IO	#USE I2C	#USE STANDARD_IO
	#USE SPI		
Memory Control	#ASM	#BYTE id=id	#ROM
	#BIT id=id.const	#ENDASM	#TYPE
	#BIT id=const.const	#FILL_ROM	#ZERO_RAM
	#BUILD	#LOCATE id=const	
	#BYTE id=const	#RESERVE	
Compiler Control	#CASE	#OPT n	#PRIORITY
	#IGNORE_WARNINGS	#ORG
