

DELAY_MS ()

Syntax:	delay_ms (time)
Parameters:	time - a variable 0-65535(int16) or a constant 0-65535 Note: Previous compiler versions ignored the upper byte of an int16, now the upper byte affects the time.
Returns:	undefined
Function:	This function will create code to perform a delay of the specified length. Time is specified in milliseconds. This function works by executing a precise number of instructions to cause the requested delay. It does not use any timers. If interrupts are enabled the time spent in an interrupt routine is not counted toward the time. The delay time may be longer than requested if an interrupt is serviced during the delay. The time spent in the ISR does not count toward the delay time.
Availability:	All devices
Requires:	#use delay
Examples:	<pre>#use delay (clock=20000000) delay_ms(2); void delay_seconds(int n) { for (;n!=0; n- -) delay_ms(1000); }</pre>

With this part, this section is concluded, if you read through all of it, you would have sufficient knowledge to code in C using CCS compiler for most kinds of PIC microcontrollers. 

Video!

On this month's DVD, we've included an exciting video of our robot in the making. You'll find the step-by-step instructions easy to follow, especially if you are not familiar with electronics and programming. Write to **editor@thinkdigit.com** and tell us about your experience.
