

```
{
File inFile = new File( "C:/orig/aFile.txt" );
}
catch( IOException io )
{
System.out.println( "IOException, io=" + io );
}
}
public static void main( String[] args )
{
FileRead fr = new FileRead();
}
```

Now an example to read characters from a file, and store it as integers.

```
public class FileRead
{
public FileRead()
{
try
{
File inFile = new File( "C:/orig/aFile.txt" );
File outFile = new File( "C:/final/outFile.txt" );
FileReader fr = new FileReader( inFile );
FileWriter fw = new FileWriter( outFile );
int c = 0;
boolean keepReading = true;
while( keepReading )
{
c = fr.read();
if( c == -1 )'
{
keepReading = false;
}
else
{
fw.write( c );
}
}
```
